ICINGA2

OPEN SOURCE MONITORING

backspace
08.12.2015

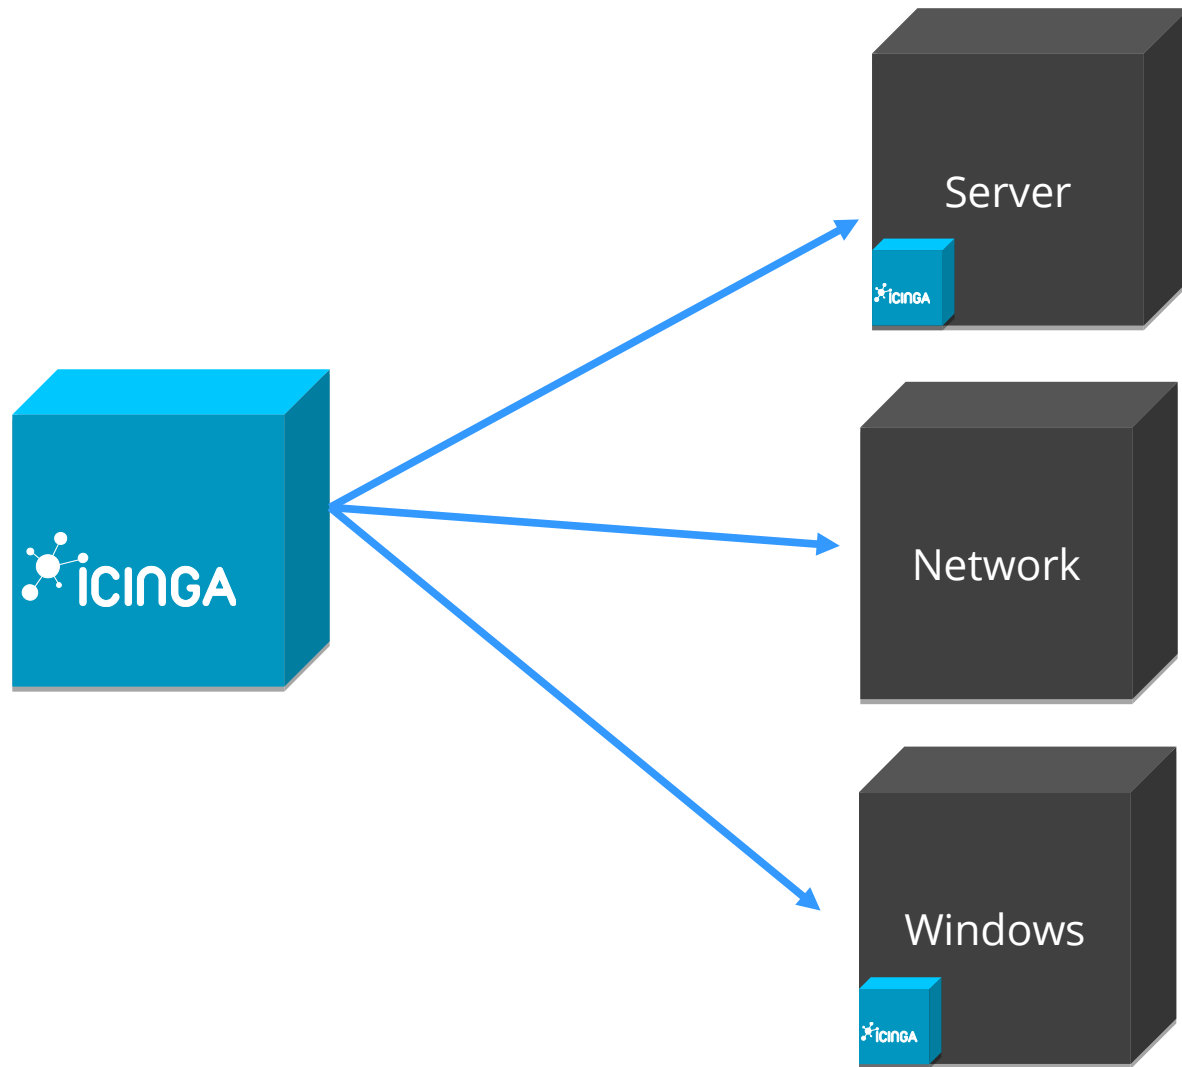

- Blerim Sheqa
 - Systems Engineer
 - Open Source
- **@bobapple**

ICINGA2

INTRODUCTION

- **Icinga**
 - Nagios fork
- **Icinga2**
 - rewrite
 - **rethink**

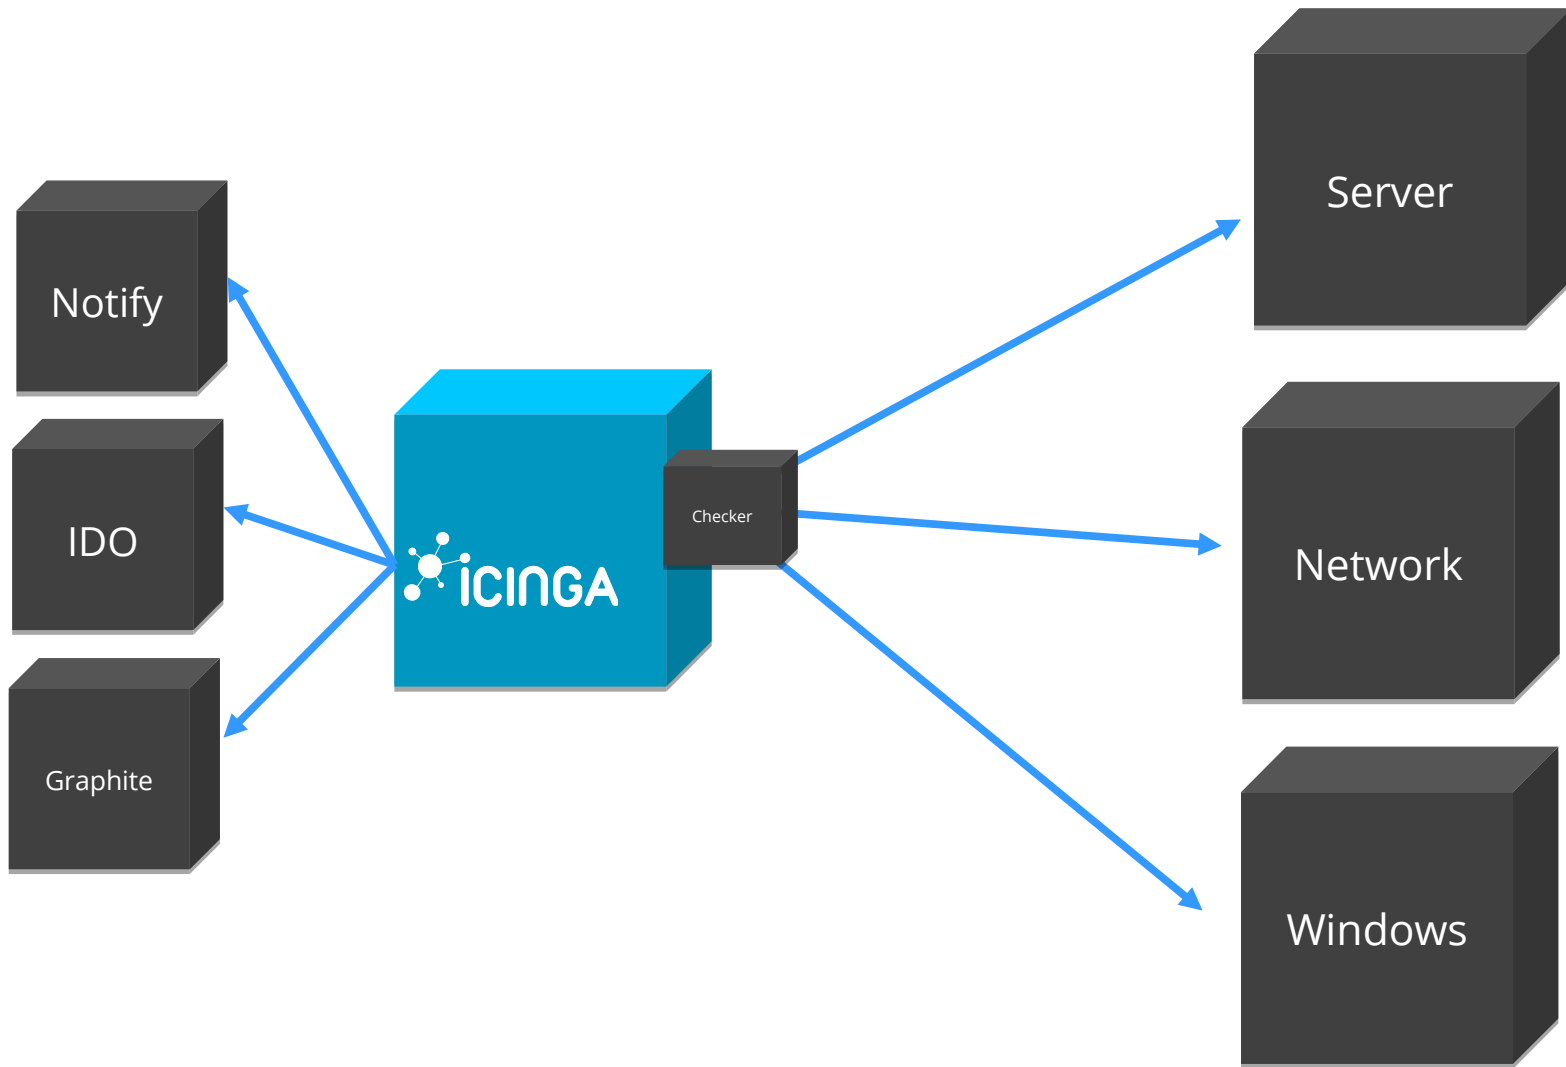

- Everything is a **feature**

- **Multithreaded**
- Modular **Features**
- **Zone** support
- Secure **Agent**

- Run **CheckCommands**
 - basically scripts
- **Retreive** result
- **React**

ICINGA2

INSTALLATION

- **packages.icinga.org**
- **Repositories**
 - SUSE / openSUSE
 - Debian
 - Ubuntu
 - Raspbian
 - Fedora
 - Epel
- **Windows**
 - Chocolatey
 - icinga2.exe

ICINGA2 OBJECTS

- Everything is an **object**
 - Objects reference other objects

- **CheckCommands**
 - Tell Icinga how to use your plugin
 - Icinga Template Library (ITL)

```
object CheckCommand "check_http" {  
  
    import "plugin-check-command"  
  
    command = [ PluginDir + "/check_http" ]  
  
    arguments = {  
        "-H" = "$http_vhost$"  
        "-S" = {  
            set_if = "$http_ssl$"  
        }  
        "-a" = {  
            value = "$http_auth_pair$"  
            description = "Basic auth username and password"  
        }  
    }  
}
```

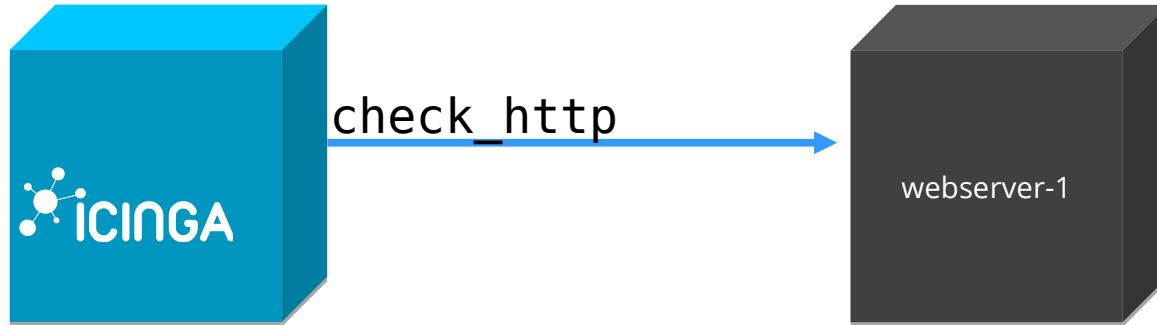

- **Hosts**
 - No further explanation

```
object Host "webserver-1" {  
    display_name = "Webserver 1"  
    address = "127.12.3.87"  
    address6 = "2001:db8:0:1"  
  
    groups = [ "all-hosts" ]  
  
    check_command = "hostalive"  
  
    vars.os = "Linux"  
    vars.oncall = true  
}
```

- **Services**

- Running your CheckCommands

```
object Service "http" {  
  
    host_name = "webserver-1"  
    display_name = "HTTP"  
  
    check_command = "check_http"  
    check_interval = 60s  
  
    vars.http_vhost = "hackerspace-bamberg.de"  
  
}
```

ICINGA2 EXCHANGE

Home Create project FAQ

Login Register

Welcome to Icinga Exchange

Icinga Exchange is a central repository for all projects which extend or support Icinga and compatible products like Nagios, Shinken and Naemon. Read more on [our about page](#).

We **shut down** [monitoringexchange.org](#). Do you miss something? Please let us know and [write us a mail](#). We migrated the [existing files](#) and you can access them [here](#).

Easily search, store and rate plugins and connect with the people behind them. You also have the possibility to synchronize a project from your [GitHub](#) repository.

If you don't have an Icinga or Monitoring Exchange account yet, just signup [here](#).

How to achieve that? [Click here](#) to read our FAQ.

in Plugins

- **Notifications**
 - Run a notification script

```
object Notification "webserver-http-notification" {  
  
    host_name = "webserver-1"  
    service_name = "http"  
  
    command = "mail-notification"  
  
    users = [ "herp", "derp" ]  
  
    types = [ Problem, Recovery ]  
  
}
```

ICINGA2

IDO

- **Icinga Data Output**
 - Export configuration and status information
 - Used by webinterfaces
 - MySQL / PostgreSQL

ICINGA2

APPLY RULES

- **Apply Rules**

- Assign objects based on rule expressions

```
assign where host.vars.os == "Linux"
```

```
assign where service.vars.oncall == true
```

```
assign where match("webserver-*", host.name)
```

```
ignore where host.vars.test_server == true
```

```
ignore where match("*internal", host.name)
```

```
apply Service "ssh" {  
    import "generic-service"  
  
    check_command = "ssh"  
  
    assign where host.vars.os == "Linux"  
}
```

```
apply Notification "oncall-sms" to Service {  
    import "sms-service-notification"  
  
    user_groups = [ "noc" ]  
  
    assign where service.vars.oncall  
}
```

```
assign where match("*has gold support 24x7*", service.notes)
&& (host.vars.customer == "customer-xy" ||
host.vars.always_notify == true)
```

```
ignore where match("*internal", host.name) ||
(service.vars.priority < 2 && host.vars.is_clustered == true)
```

ICINGA2
INTERACT

- **Downtimes**

- Set services to maintenance mode
- Suppress notifications
- Don't show up on webinterface

- **Acknowledgement**

- “I know it's broken, leave me alone”
- “Ok ...”
- “But tell me if it breaks again”

- **Eventhandler**

- Run a command when the state of a service changes

ICINGA2 ZONES

- **Zones**

- High availability
- Distributed setups
- Load distribution
- Remote clients

Zone

```
object Endpoint "icinga2a" {  
    host = "icinga2a.icinga.org"  
}
```

```
object Endpoint "icinga2b" {  
    host = "icinga2b.icinga.org"  
}
```

```
object Zone "config-ha-master" {  
    endpoints = [ "icinga2a", "icinga2b" ]  
}
```

- Zones **communication**
 - SSL
 - CLI tools for simplification
 - Config distribution
 - Accept config
 - Accept commands

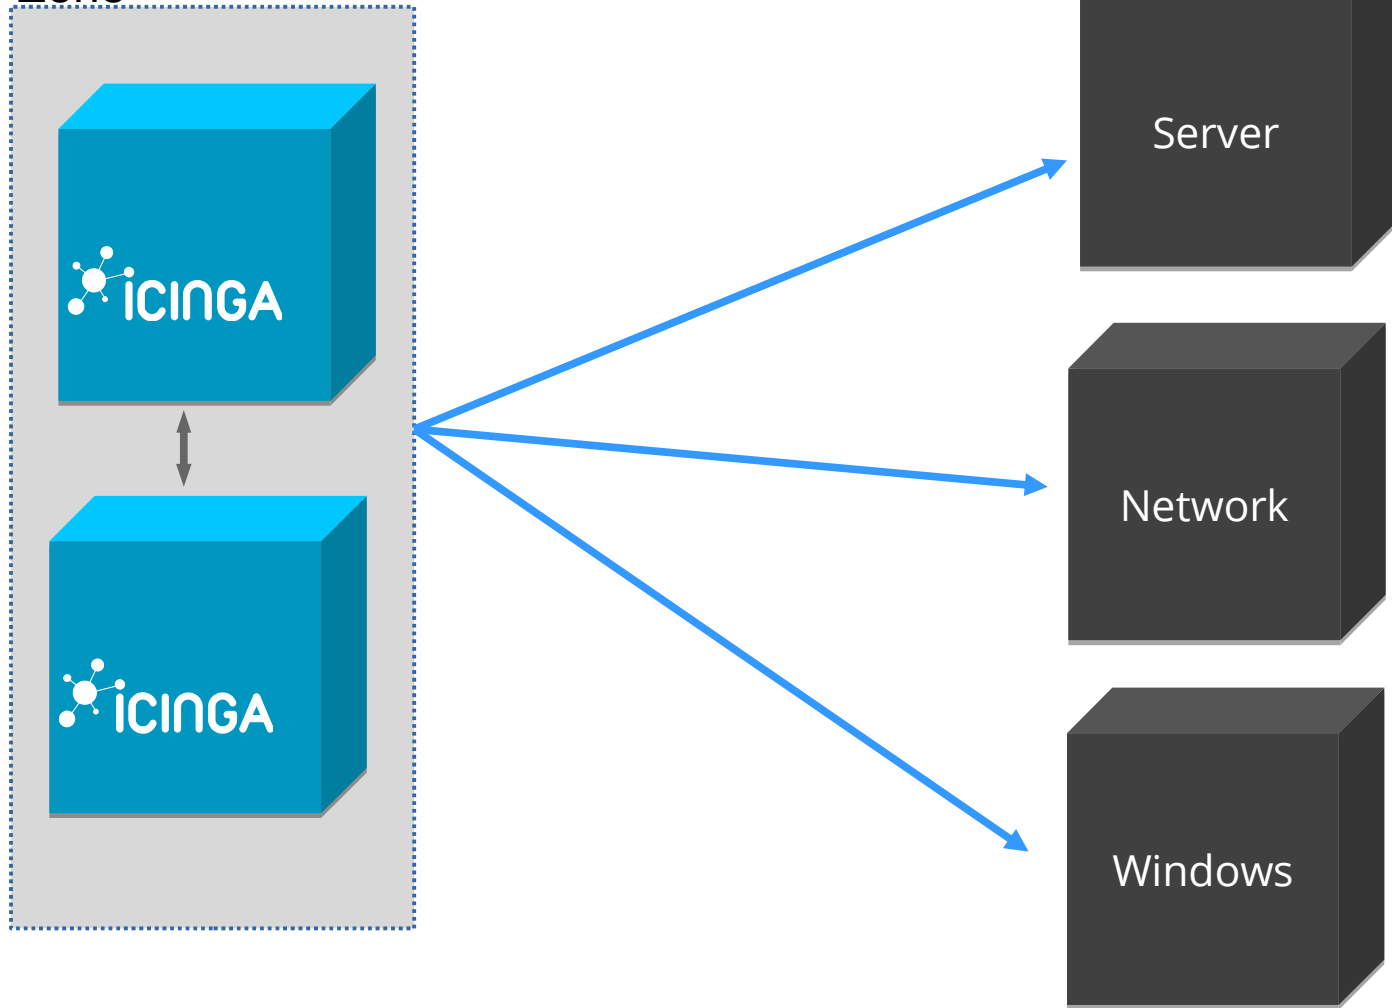

```
/etc/icinga2
|- icinga2.conf
|- pki/
|- zones.d/
  |-- master/
    |-- services.conf
    |-- hosts.conf
```

ICINGA2

CLUSTER SCENARIOS

Zone

Master Zone

Frankfurt

Berlin

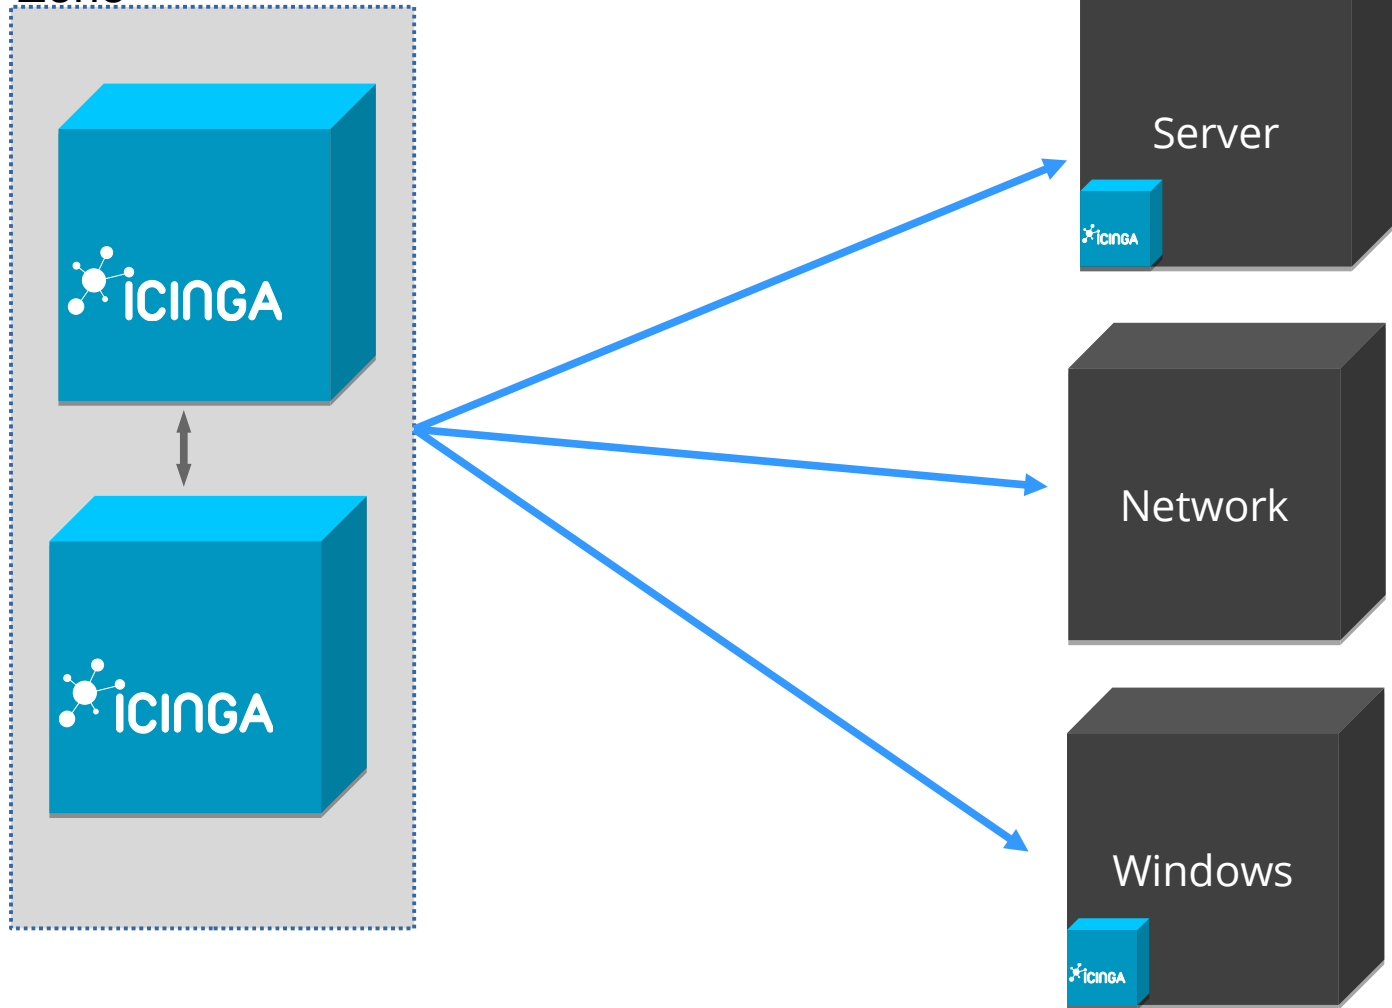

München

```
object Zone "satellite-frankfurt" {  
  
    endpoints = [ "icinga2c" ]  
    parent = "config-ha-master"  
  
}
```

Zone

Master Zone

Frankfurt

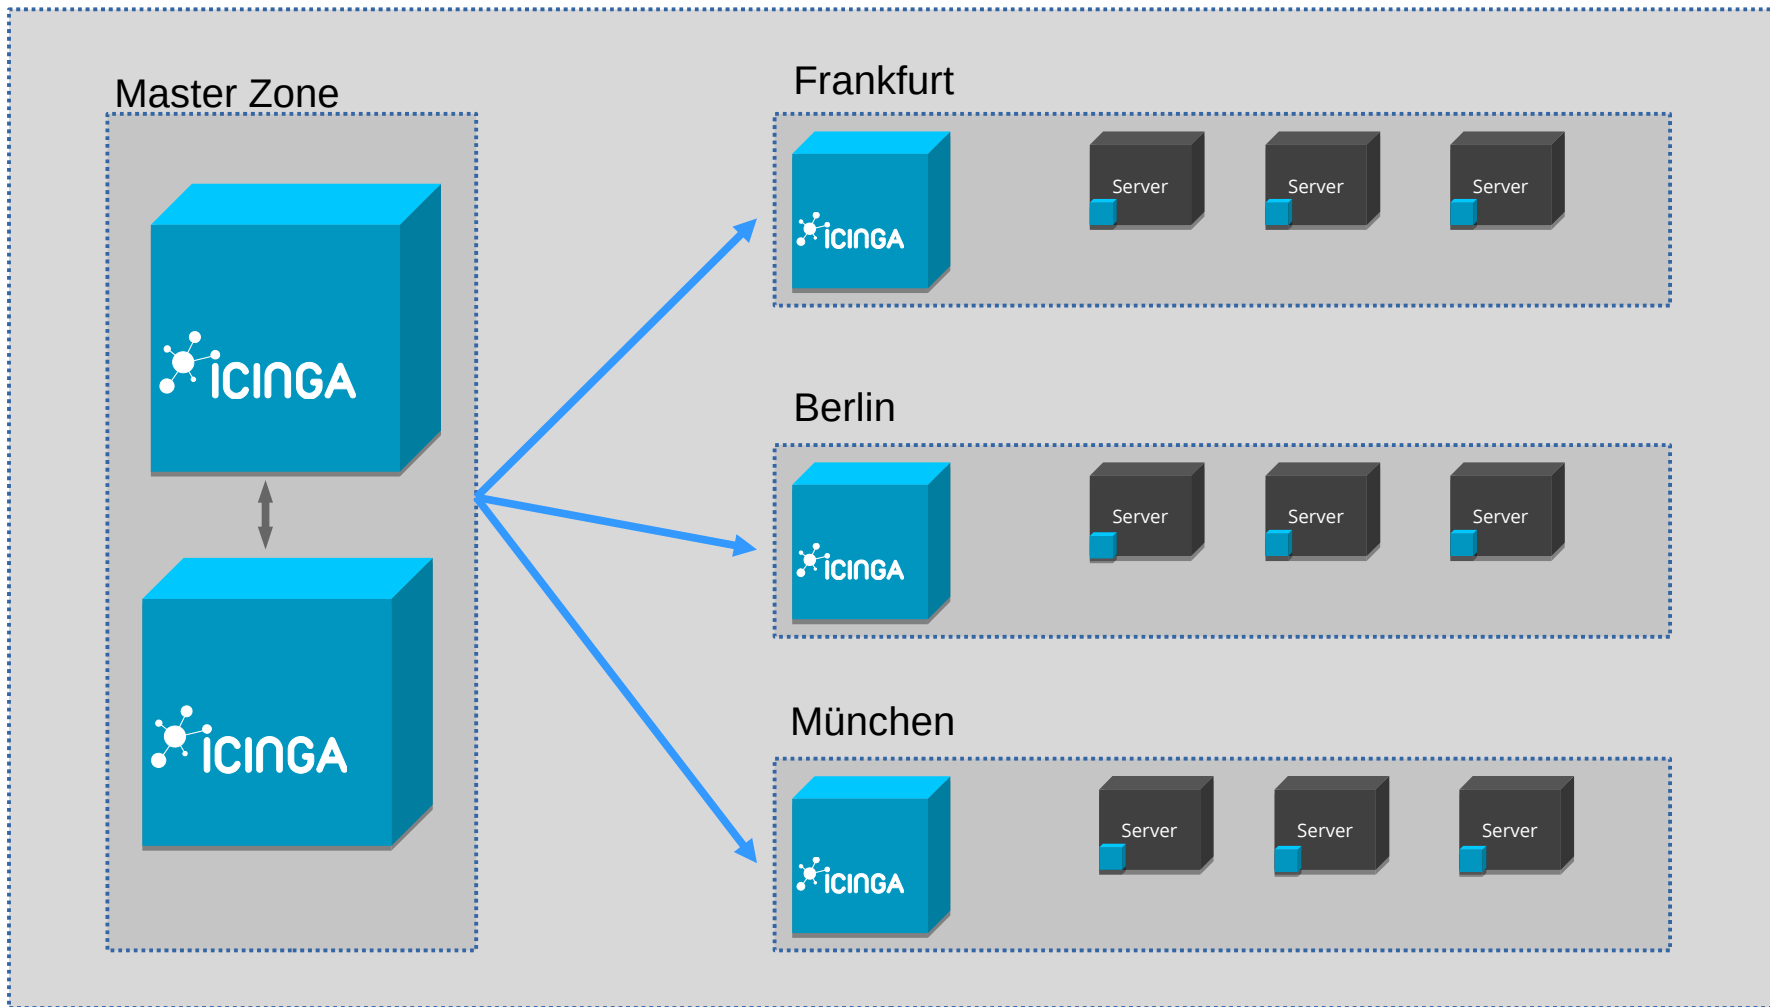

Berlin

München

Global Zone

```
/etc/icinga2
|- icinga2.conf
|- pki/
|- zones.d/
  |-- global/
    |-- commands.conf
  |-- master/
    |-- services.conf
    |-- hosts.conf
  |-- frankfurt/
    |-- services.conf
    |-- hosts.conf
  |-- berlin/
    |-- services.conf
    |-- hosts.conf
  |-- muenchen/
    |-- services.conf
    |-- hosts.conf
```

ICINGA2

API

- **HTTP** with **RESTful** Url Schema
- **ApiUser** config object
- **X.509** and/or **Basic Auth**

```
object ApiUser "root" {  
    password = "icinga"  
    permissions = [ "*" ]  
}
```

```
permissions = [  
  {  
    permission = "objects/query/Host"  
    filter = {{ regex("^Linux", host.vars.os) }}  
  },  
  {  
    permission = "objects/query/Service"  
    filter = {{ regex("^Linux", service.vars.os) }}  
  }  
]
```

- create, modify and delete **objects**
- **retrieve** information and **run actions**
- **subscribe** to events
- **manage configuration** packages

- **Configuration management**
 - New standard **config** API
 - Support for **Packages** and **Stages**
 - Support for **Zones**

- **Event Streams**

- Based on **Types** and **Filters**

*CheckResult, StateChange, Notification,
AcknowledgementSet, AcknowledgementCleared,
CommentAdded, CommentRemoved, DowntimeAdded,
DowntimeRemoved, DowntimeTriggered*

- **Example**

`/v1/events?queue=backspace&types=CheckResult`

- **Status, Objects, Actions and Events**
 - Simple **filter**
 - `services?service=localhost!ping6`
 - Advanced **filter**
 - `type=Service&filter=service.name==%22ping6%22`

ICINGA WEB 2

- Developed in **PHP** 5.3
- **Multiple** authentication methods
 - Active Directory, LDAP and DB
 - Via Webserver, e.g. Kerberos
 - May be **chained**

- **Easy** to extend and embed
- **JSON** and **CSV** export
- Support for **MySQL** and **PostgreSQL**
- **Responsive** layout

ICINGA ROADMAP – **WHAT'S NEXT?**

Improving the product **based** on your **feedback**

We are thinking about a new **historical
datastore** for Icinga 2 (not in 2.5)

We plan to release **more modules** for
Icinga Web 2 in the next months

We'll release a **web based configuration module** for Icinga Web 2

- **Icinga 2.5** is planned for Q1 2016
- **Icinga Web 2.2** is planned for Q1 2016

OUR VISION

OpenTSDB

logstash

CONCLUSION

- Download **Icinga 2** and **Icinga Web 2**
- Or play with the **Vagrant boxes**
- **Rethink** your configuration
- Give us **feedback**

THANK YOU!
